

# LET YOUR BLINDS FOLLOW THE SUN

# AUTOMATE YOUR BLINDS TO INCREASE PERFORMANCE

Kindow offers a unique and affordable solution to automate your blinds. The position of your blinds will be optimized for saving energy and increasing productivity of the people on the work floor. With Kindow all blinds will be in the same position and your building will have a professional, uniform appearance.

Save on blind  
automation costs

Save energy on lighting,  
heating and cooling

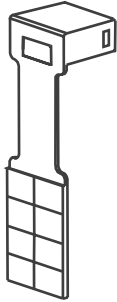

Create a uniform  
appearance

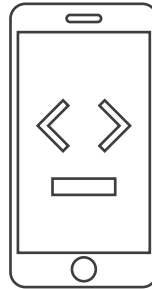

Increase productivity  
on the work floor

# EASY INSTALLATION & CONTROL WITHOUT THE COST OF WIRING

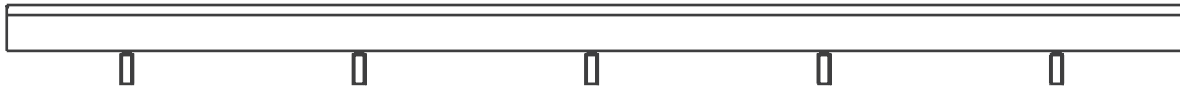

**Solar powered:** Autonomous power supply with a solar panel that charges the battery > No installation costs for power supply.

**Wireless control:** Installation and control app on your smartphone and computer to control groups of systems > No installation costs for communication.

**Intelligent automation:** Increase energy savings and productivity by taking into account relevant weather data and space occupancy.

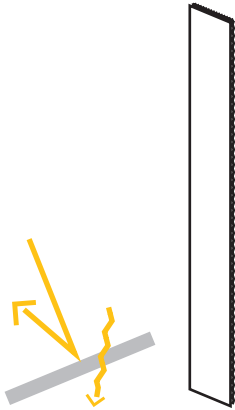

**Automated sun tracking:**  
The blinds will follow the sun automatically allowing more view and daylight.

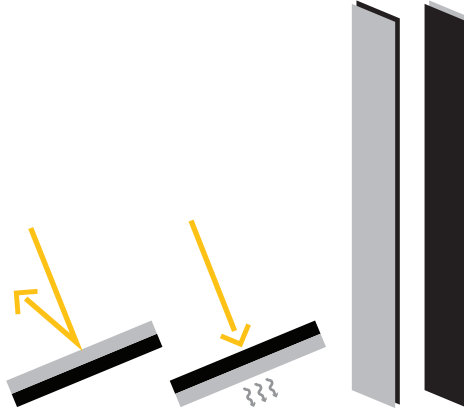

# USE ANY BLIND

## THAT MATCHES YOUR PROJECT

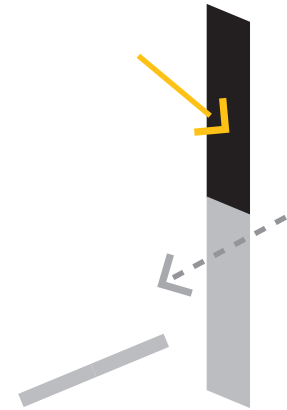

**Suitable for any blind.** Kindow blind automation can be combined with any type of vertical blind. You can choose a standard blind or Kindow can offer special blinds that maximize your energy savings and comfort. The choice of blind will depend on your project specifications. Kindow can consult in your decision.

**Transparent blinds:** Reflect only direct light from the sun and allow all soft diffuse daylight to come in > Save on artificial lighting.

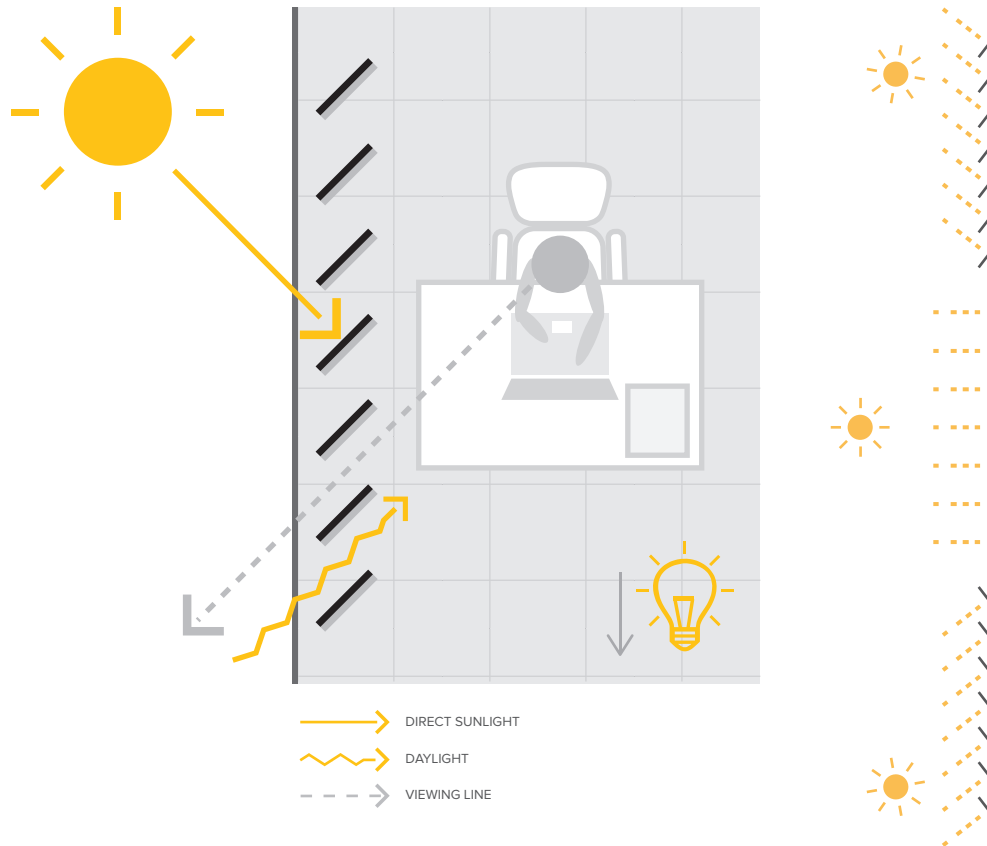

**Two-sided blinds:** Harvest heat in winter and reflect heat in summer > Save on heating and cooling.

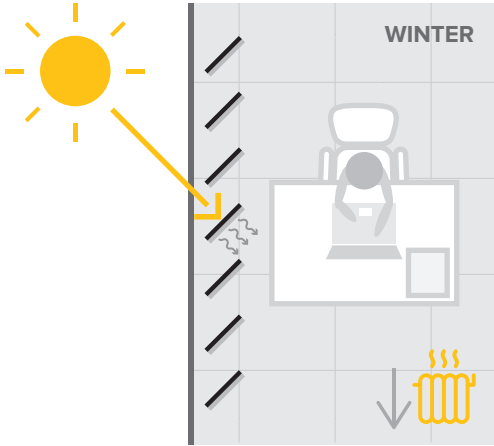

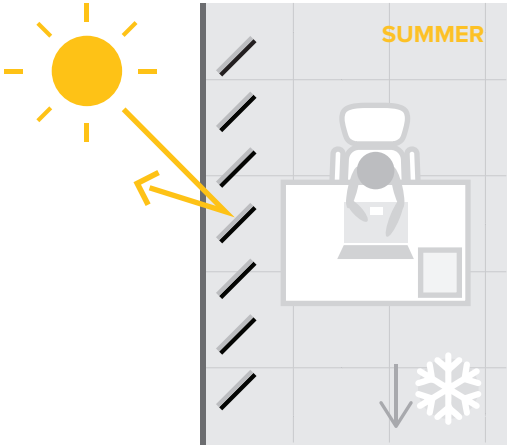

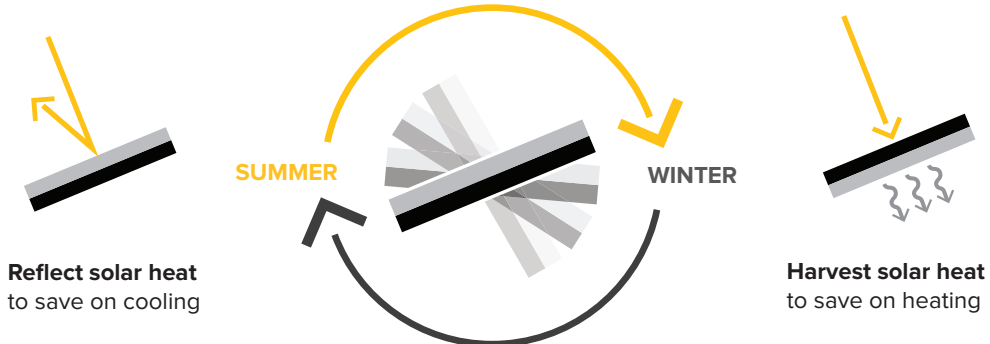

**Split blinds:** The perforated bottom part of the blinds is see-through > Allowing more view to the outside.

# BLINDS TRACK THE SUN TO ALLOW VIEW & DAYLIGHT

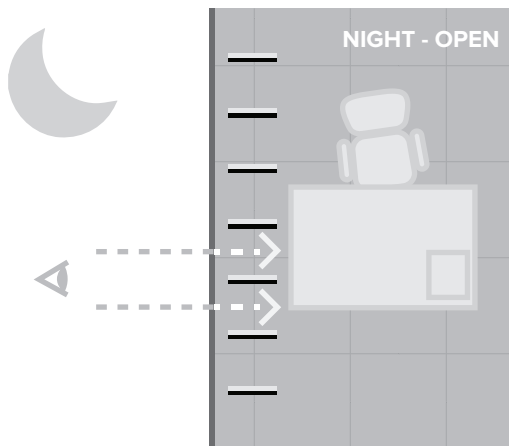

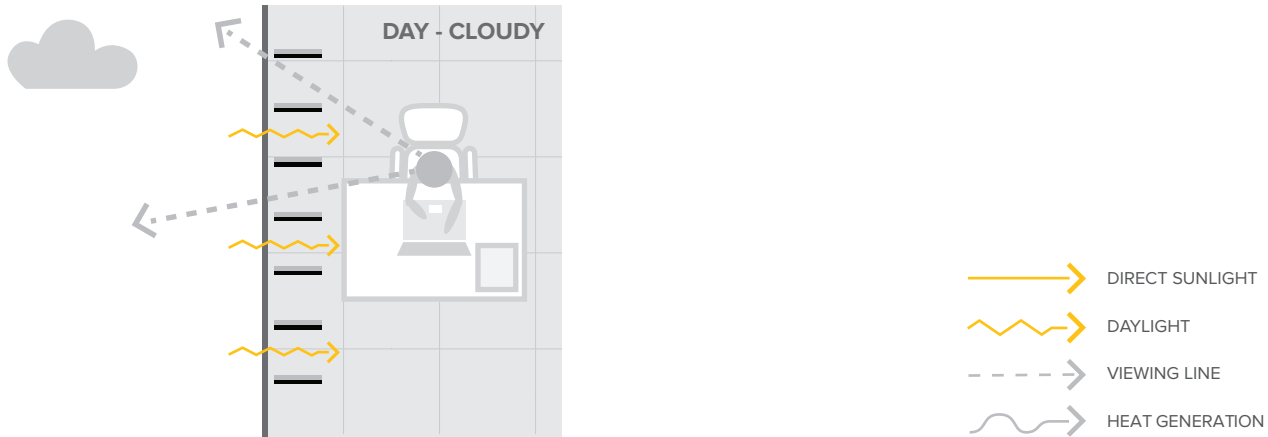

**Kindow lets your blinds follow the sun.** Glare and heat is kept out while the blinds open during the day to allow more view and daylight. This results into higher productivity and energy savings for artificial lighting.

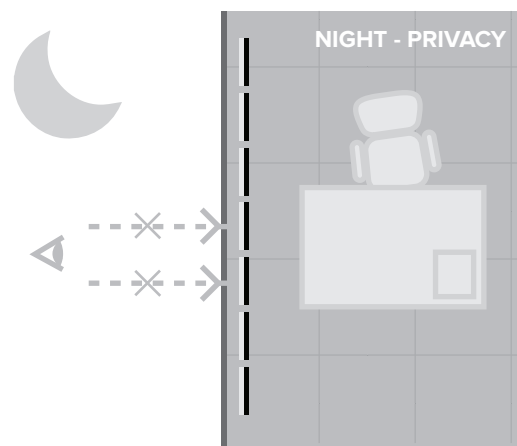

# BLINDS SWITCH SIDES TO REFLECT OR HARVEST HEAT

# BLINDS GO TO A FIXED POSITION WHEN THERE IS NO SUN
